

FROM: Mark Biegert
SUBJECT: Lake Level Overview
DATE: 13-July-2024

Hi folks,

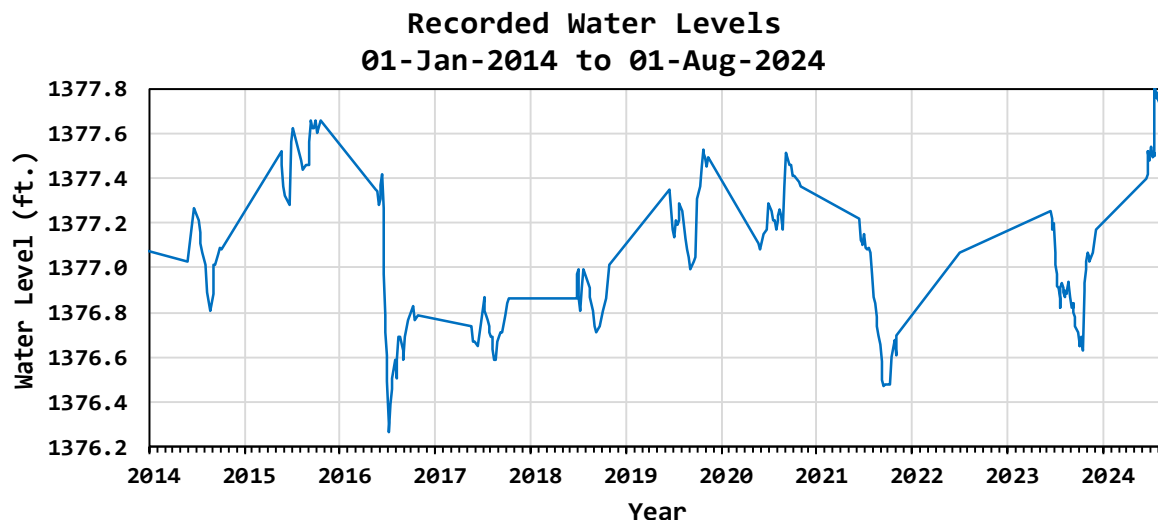

I have heard people asking questions about our current lake height relative to previous years. We actually have data on this subject and I thought I would pull together a quick report.

I need to say a quick thanks to Brent for sending me his lake level readings before MnDNR has had time to update their website.

Here is the current MnDNR chart of the Eagle Lake level. The data is limited to a 10 year range and no information after 16-May-2024. The red line is the Ordinary High Water Level of 1376.4 feet above sea level.

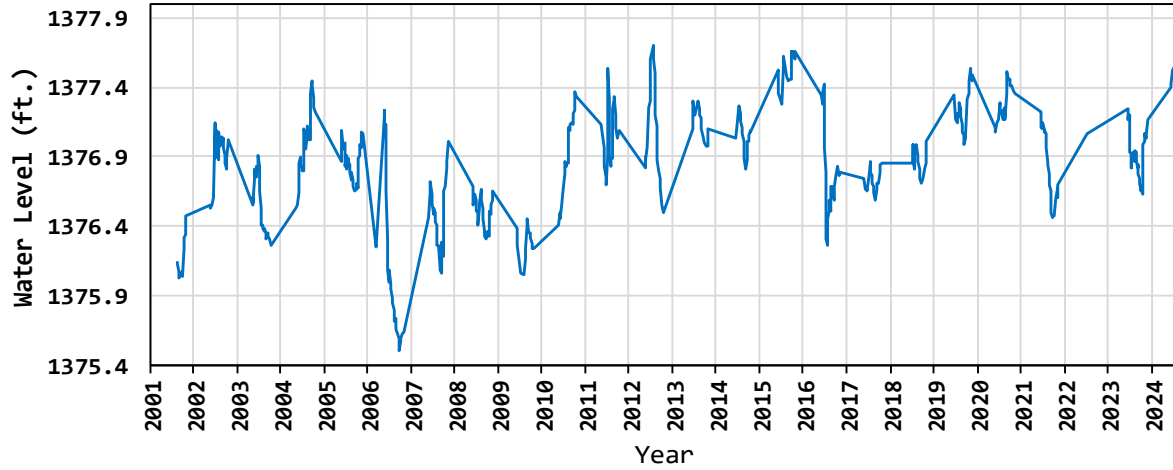

I created my version of this chart with Brent's recent data that runs through 7-July-2024.

As you can see, the lake level is the highest we have seen in the last ten years. If I plot all the data the MnDNR has, I get the following chart.

Recorded Water Levels 01-Jan-2001 to 01-Aug-2024

The highest recorded lake level was on 19-Jun-2024 at 1377.83 feet above sea level, which is 1.56 inches above the previous high. It has dropped about 1 inch as of today. Since 2001, the lake level has had a range (max to min) of 2.32 feet.

Lake Level	Level (ft)	Date
Highest Level	1377.83	19-Jun-24
2nd Highest	1377.70	06-Jul-12
Difference	0.13 ft	
	1.56 in
